SENIOR PRODUCT DESIGNER

Senior Product Designer with 10+ years' experience in end-to-end UX & UI design and web-coding, specialising in the design of complex technical tools and B2B SaaS products, most recently including no-code application builders and data-focused dashboards.

Key strengths include collaborating across teams to transform complex information systems and data into highly usable products which empower users and deliver real value to businesses.

PROFESSIONAL EXPERIENCE

Senior Product Designer at Knack

March 2024 - Present • Remote • Design team of 2

- I lead the end-to-end design of the entire ecosystem for a no-code app building tool used by over 110,000 businesses and independent creators.
- Design and maintain UI components library and standards for multiple interface types with varying user requirements and personas, applying design principles and industry best practices.
- Create wireframes and interactive prototypes for usability testing and validation.
- Iterate on user flows and designs based on research and feedback, working closely with engineers throughout to ensure technical feasibility.
- Collaborate with PMs on product strategy, conducting user research and defining feature specifications.
- Significant projects I have led include:
 - full redesign of the entire platform, including extensive UX changes to the app builder and themes areas. This was a long-term project with many technical constraints which involved working closely with engineers to identify solutions and refactor the legacy codebase;
 - integration with a third-party partner to design and implement a complex workflows feature;
 - end-to-end design of a new AI feature which increased trial conversion (3.5%). I coded and user-tested prototypes, iterated and delivered final designs, and collaborated on technical specs.

Lead Product Designer at Vaayu

November 2022 - March 2024 • Remote • Design team of 1

- Designed a B2B advanced analytics dashboard to enable retailers to visualise and easily track carbon emissions across their products and supply chains.
- Led a broad range of design projects, ranging from a scenario-modelling and targets feature to designing and co-coding a B2C consumer carbon calculator.
- Collaborated closely with in-house climate scientists, legal counsel and external stakeholders to define the information architecture and distil complex user flows into an intuitive experience.
- Conducted user interviews and usability tests with customers and prospects to validate design decisions, explore and solve customer problems and inform the product roadmap.

DESIGN SKILLS

Wireframing
Prototyping (including AI prototyping)
Design Systems
UI Design
Data Visualisation
Interaction Design
IA Design
Usability Testing
User Research
A/B Testing

TECHNOLOGIES

Figma
Sketch
Framer
Adobe Suite
HTML
CSS, LESS, Sass
Javascript, jQuery
Charting Libraries

EDUCATION

UX Design Institute
Professional Diploma
UX Design, 2019

BPP University
Legal Practice Course
(Distinction)
2010 - 2011

University of Leeds
Law LLB (2:1)
2007 - 2010

Product Designer at Global App Testing

December 2020 - November 2022 • Remote • Design team of 3

- Designed and shipped a SaaS platform for crowd-sourced QA testing, including creating a full design system to allow the product to scale quickly and consistently.
- Collaborated closely with PMs and tech leads to explore problem spaces and drive continuous discovery, including facilitating workshops with engineers to ideate on solutions.
- Ran design sprints and frequently led agile ceremonies.

Senior UX/UI Designer at DNV-GL

September - December 2020 • Barcelona, Spain • Design team of 2

- Working with 3 teams of developers, led the UX and visual design of a renewable energy tracking system, from initial wireframes through to prototypes and final designs.

Senior UX/UI Designer at KPMG

October 2015 - August 2020 • Leeds, UK • Design team of 4

- Designed and implemented customer analytics platforms for clients such as EasyJet and British Gas.
- Worked with data specialists and product leads to facilitate requirements gathering sessions for enterprise projects, managing stakeholder relationships and conducting regular design reviews.
- Designed dashboards, reporting tools and data visualisations, then implemented the front-end code for them (using HTML, CSS, JavaScript, some C#), building strong technical skills that enable effective collaboration with engineering teams.
- Designed and built internal tools to visualise and analyse the results of the annual [Customer Experience Excellence study](#).
- Mentored junior designers who were part of the KPMG graduate scheme.

Legal Executive at Gordons LLP & Squire Patton Boggs

July 2011 - September 2015 • Leeds, UK

- Worked as part of cross-functional, international teams representing banks and businesses on corporate finance transactions, including running my own caseload.
- Developed transferable skills in stakeholder communication, analytical thinking, processing and prioritising complex information, all of which helped me successfully transition to product design and now inform my current design approach.

ADDITIONAL EXPERIENCE

Product Designer & Co-Founder at [MealsUp iOS App](#)

From February 2017

As a side project, co-founded and designed a successful meal-scheduling app with over 15,000 users and an App Store rating of 4.8.

Product Designer for [adventure.gen iOS App](#)

From March 2024

Designed an adventure game app which uses AI to generate an illustrated narrative based on user inputs.
