SENIOR PRODUCT (UI/UX) DESIGNER

Senior Product Designer with 10+ years' experience, specialising in designing complex tools including data visualisations and dashboard UIs for SaaS products and no-code application builders. Key strengths include collaborating across teams to transform complex concepts and systems into clear, consistent experiences which empower users and deliver real business value.

PROFESSIONAL EXPERIENCE

Senior Product Designer at [Knack](#)

March 2024 - Present • Remote • Design team of 1-2

- Lead the end-to-end UI and UX design of the entire ecosystem for a no-code app building tool used by 110,000+ businesses and independent creators.
- Responsible for the UI design of multiple interfaces used by different user personas: a data-heavy workflow and data management tool (via relational databases); and a consumer-facing app for end users.
- Own and evolve a multi-tenant UI components library and React design system, including usage guidelines and component specifications, ensuring visual harmony and pixel-perfect cross-interface implementation.
- Design fully responsive UI patterns for live app components, ensuring a consistent end-user experience with various builder configurations.
- Create wireframes and interactive prototypes for new features, iterate based on research, and collaborate with product managers to conduct usability tests and manage feedback.
- Significant projects I led recently include:
 - Full platform redesign: visual, interaction and UX overhaul of the entire design system and dual platforms to modernise and create a maintainable system, also ensuring WCAG compliance. Included close collaboration with engineers to navigate significant technical constraints involved in maintaining compatibility with legacy systems. Led to a ~3.5% increase in trial conversion.
 - Data visualisation design: migrated from Highcharts to Recharts and built a comprehensive chart colour preset system from scratch, collaborating with engineers to ensure scalable and implementation-friendly patterns.
 - AI feature: end-to-end design including coded prototypes and usability testing, of a new AI editing tool.

Lead Product (UX/UI) Designer at [Vaayu](#)

November 2022 - March 2024 • Remote • Design team of 1

- Owned the end-to-end UI design for a B2B advanced analytics dashboard to enable retailers to visualise and easily track carbon emissions across their products and supply chains.
- Built a components library for charts and UI elements from scratch, establishing visual standards and reusable patterns for the dashboard's data visualisations.
- Translated complex emissions data into clear, accessible data visualisations and intuitive reporting interfaces, including an emissions-reduction modelling feature to track progress against EU Science-Based Targets Initiative. This required

DESIGN SKILLS

UI Design
Design Systems
Data Visualisation
Interaction Design
Prototyping (including AI prototyping)
Wireframing
IA Design
Usability Testing
User Research
A/B Testing

TECHNOLOGIES

Figma
Framer
Sketch
AI prototyping tools
Adobe Suite
HTML
CSS, LESS, Sass
Javascript, jQuery
Charting Libraries

EDUCATION

UX Design Institute
Professional Design
Diploma (Distinction)
2019

BPP University
Legal Practice
Course (Distinction)
2010 - 2011

University of Leeds
Law LLB (2:1 Hons)
2007 - 2010

careful UI decisions to represent complex, interconnected data without overwhelming users.

- Collaborated with in-house climate scientists and legal counsel to define the information architecture and distil complex user flows into an intuitive experience.
- Designed and co-coded a responsive B2C carbon calculator, from concept to the end implementation of the consumer-facing tool.
- Conducted user interviews and usability tests with customers and prospects to validate design decisions, explore and solve customer problems and inform the product roadmap.

Product Designer at [Global App Testing](#)

December 2020 - November 2022 • Remote • Design team of 3

- Designed and shipped a SaaS platform for crowd-sourced QA testing, including creating a full design system and components library to allow the product to scale quickly and consistently.
- Collaborated with PMs to explore problem spaces and drive continuous discovery, including facilitating workshops with engineers to ideate on solutions. Ran design sprints and led some agile ceremonies.

Senior UX/UI Designer at DNV-GL

September - December 2020 • Barcelona, Spain • Design team of 2

- Led the UX and visual design of a renewable energy tracking system, from initial wireframes through to prototypes and final dashboard designs, working with 3 engineering teams.

Senior UX/UI Designer at [KPMG](#)

October 2015 - August 2020 • Leeds, UK • Design team of 4

- Designed and implemented customer analytics platforms for enterprise clients such as EasyJet.
- Designed dashboards, reporting tools and data visualisations across web and mobile-first interfaces, then implemented the front-end code for them (using HTML, CSS, JavaScript, C#), building a strong technical foundation that enables effective collaboration with engineering teams.
- Worked with data specialists and product leads to facilitate requirements gathering sessions for enterprise projects, helping to manage stakeholder relationships and conducting regular design reviews.
- Designed and built internal tools to visualise and analyse the results of the annual [Customer Experience Excellence](#) study, including data visualisation components and reporting features.
- Mentored junior designers who were part of the KPMG graduate scheme.

Legal Executive at Gordons LLP & Squire Patton Boggs

July 2011 - September 2015 • Leeds, UK

As part of an international team, represented banks and businesses on corporate finance transactions, including running my own caseload. Developed transferable skills including communicating with stakeholders and analytical thinking, which helped in my transition to design.

ADDITIONAL EXPERIENCE

Designer & Co-Founder at [MealsUp iOS App](#)

From February 2017 • Side Project

Designed a successful meal-planning app with 15,000+ users and an App Store rating of 4.8, including UI and brand identity design.

Designer at [adventure.gen iOS App](#)

From March 2024 • Side Project

Designed an adventure game app which uses AI to generate illustrated narratives based on user inputs.
